

Beech Class Forest School Sept – Oct 2020.  
We climbed the tump, discovered Dor Beetles, Fly Agaric fungi, acorn craft, whittling and games.

We discovered that the black beetles are Dor Beetles.

We were an ant colony on a food hunt and collected one item each to share. Great teamwork!

"Wow, this place is magical, it's like a rainforest!"

Teaching the adults how to whittle.

A game finding flags and making a group of 3 animals in a food chain.

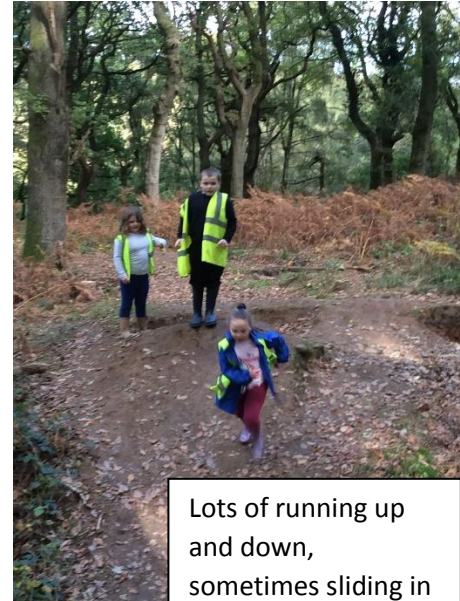

We discovered that water and soil make mud and it's fun to slip over. Wet clay sticks stones to trees.

Various predator and prey animals were hidden around and children spotted and named them.

We all collected wood for the fire on the way, whittled sticks to finally toast marshmallows.

Lots of running up and down, sometimes sliding in the mud.

A frog we observed.

The children enjoyed a giant web assault course set up by Sycamore class and then added to it. Lots of careful moving.

Various base camps for running from the baddies, predators and prey with a few zombies thrown in.

Swings were made every week in different ways on different trees and by different children.
